

**Review Form 1.6**

Journal Name:	<b>Asian Journal of Research in Surgery</b>
Manuscript Number:	<b>Ms_AJRS_93307</b>
Title of the Manuscript:	<b>A Case Report of a Muroid Cyst of the Penis</b>
Type of the Article	

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalajrs.com/index.php/AJRS/editorial-policy> )

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</b>
<b>Compulsory</b> REVISION comments	<ol style="list-style-type: none"> <li>1. Remove the following from case report and place it in discussion: "Mucus penile cyst is a rare benign disease that mostly affects young men on the ventral aspect of the glans penis. Epidermal cysts, lipomas, steatocystomas, dermoid cysts, pilonidal cysts, Tyson gland cysts, and urethral diverticulums are all differential diagnoses. 2 Several terminologies should be regarded synonymous, including mucus cyst of the penis, genitoperineal cyst of the median raphe, parameatal cyst, hydrocystoma, and apocrine cystadenoma of the penile shaft.3 They are midline cysts that can be found anywhere from the anus to the urinary meatus. The majority of them are present from birth, however they are generally not identifiable until adolescence or age.4The cysts form mostly on the penile ventral side, near the glans. They are usually asymptomatic, but might be worsened by infection, trauma, or making coitus difficult, as in the case of the patient in this report. Excision surgery is necessary.4"</li> <li>2. Please correct grammar mistakes and make necessary changes in expression such as: use the phrase "Excision is the treatment of choice" instead of "<b>They are cut out during circumcision</b>", use the phrase "adolescence or manhood" instead of until "<b>adolescence or age</b>"</li> <li>3. What do you mean with the phrase "Whether or whether it is connected"?</li> <li>4. US images would add value to the total presentation of your paper.</li> <li>5. You haven't provided enough explanation regarding the cysts origin and how they are formed. I suggest that you read the paper <i>Syed MMA, Amatya B, Sitaula S. Median raphe cyst of the penis: a case report and review of the literature. J Med Case Rep. 2019 Jul 14;13(1):214. doi: 10.1186/s13256-019-2133-5. PMID: 31301740; PMCID: PMC6626626.</i></li> <li>6. Why did the patient have to undergo surgery under spinal cord anesthesia and why did he have to remain hospitalized for 3 days? Local anesthesia is, at least at most of the times, sufficient for such kind of operations, permitting an early discharge of the patient, especially of that age (57).</li> </ol>
