SDI EDITORIAL COMMENTS FORM

EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
The authors are suggested to properly address the following: **1. Duplicated keywords (same as the paper title) must be re-chosen.** **2. The reference list must be alphabetically ordered according to the last names of the first author.** **3. Decimal places of all the correlation coefficients must be unified to either 3 or 4 places, not both.** **4. Table number referred to in the text should be in sequential order, not "Table 7" referred to first.** **5. Most tables are not self-explanatory.** **6. Tables 3 to 6 have not been referred to in the text. Where in the text should the readers refer to the right table?** **7. In Tables 5 and 6, why the coefficients between the same parameters (such as Df50%) not equal to 1.0000?** **8. What is the practical implication and contribution from this study results? Without this descriptive, this article can only be counted as an excellent experimental report, not a scientific journal paper.**	**Changes have been made for the given points except for points 5 and 8** **Point 5 in the editorial comments implies that the tables are not self-explanatory, please give a detailed report on the changes that are to be made to the tables.** **Please elaborate the point 8 so that the changes can be made more accurately**
