PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	In this article, a case with an underlying headache syndrome with symptoms consistent with Alice in Wonderland syndrome is presented. Considering the few cases in the literature, the article has the quality to contribute to the reader. Some revisions are needed; 1. The last paragraph of the introduction is not meaningful, a paragraph describing the feature of the case should be added. 2. The case should be given in more detail. Psychiatric and neurological examination findings should be explained in detail. It is unclear whether a diagnosis of migraine has been made. It should be explained which type of headache is diagnosed. 3. Laboratory and physical examination findings should be given in detail. 4. It should be explained how the patient's history of dissociative disorder, psychotic disorder was excluded. The SCID result should be given. It should be emphasized who conducted the interview at what stage. Similarly, family history should be given in more detail. 5. It is not clear for what purpose the drugs are given. It should be detailed when it was started, how long it was used, and when the responses were received. 6. How long the patient was followed, what was the process afterward, should be added to the case. 7. The view that this syndrome takes place in DSM is not very meaningful, the expression should be changed.	<ol style="list-style-type: none"> 1. Edited the Introduction paragraph and removed the last paragraph which the reviewer found was not meaningful. The case study describes the features of the case more in-depth. 2. More detail on psychiatric exams (psychometric tests) and neurologic exams (MRI/EEG) was added to the case which gives a bit more background on exams performed. The case has been updated to indicate that the patient was diagnosed with Alice in Wonderland Syndrome secondary to migraine and cluster headaches. 3. Laboratory and physical exams were explained in greater detail within the case. 4. Through the use of a psychiatric evaluation and examination, the psychiatrist was able to rule out any other psychiatric condition such as dissociative disorder. This was added to the case. 5. Added the purpose of the valproic acid, how long the patient has been on it, and how it has helped his symptoms subside. 6. Added to the case how long the psychiatrist saw the patient and when is he scheduled to return to the clinic for re-evaluation. 7. Removed the "syndrome takes place in the DSM" since it wasn't meaningful to the case.
Minor REVISION comments	<ol style="list-style-type: none"> 1. Most of the references are incomplete and misspelled, some sources are written twice. 2. The fact that all subsections are composed of a single paragraph makes it difficult to read. Each section should be divided into paragraphs. 	<ol style="list-style-type: none"> 1. Removed the duplicate reference 2. Broke up the subsections into smaller paragraphs
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
