

Review Form 1.7

Journal Name:	International Journal of Research and Reports in Gynaecology
Manuscript Number:	Ms_IJRRGY_110244
Title of the Manuscript:	Unsafe abortions at the University Hospital Bogodogo (UTH-B) in Ouagadougou, Burkina Faso
Type of the Article	Original Research Article

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <p>1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)</p> <p>2. Is the title of the article suitable? (If not please suggest an alternative title)</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>The article is weak in terms of scientific novelty. Scientific literature widely describes the complications of illegal abortion. What is the authors' objective? The text may be useful for the development of new welfare strategies for local women.</p> <p>Health professionals have a social responsibility to educate policymakers, legislators, and the public at large about adverse impacts of restrictive abortion regulations, laws, and policies on women's health. The liberalized abortion law can save pregnant women from abortion related complications and death.</p> <p>The article can become more interesting by describing and comparing illegal abortions in countries where the practice is permitted or prohibited. Change something? How were abortions legalized? What are the strategies adopted? What has changed in terms of numbers and health?</p> <p>The title and abstract are well written. The references are excessively old, the authors are asked to also cite more recent texts. The latest data is needed. I suggest:</p> <ul style="list-style-type: none"> - Bridwell RE, Long B, Montrieff T, Gottlieb M. Post-abortion Complications: A Narrative Review for Emergency Clinicians. Minor REVISION comments		
1. Is language/English quality of the article suitable for scholarly communications?	<ul style="list-style-type: none">- The use of the English language is good	
Optional/General comments	<ul style="list-style-type: none">- I would like the article to include the average time after which women go to the hospital from the beginning of the abortion procedure.- In the text I read about the existence of the “Post Abortion Care”. You need to introduce data on how you follow women after their abortion. Do women follow sex education plans? Are contraceptives administered or offered? Are you aware of any social consequences suffered by patients? <p>Changes in the text should come back highlighted in red</p>
