

Review Form 1.7

Journal Name:	International Research Journal of Gastroenterology and Hepatology
Manuscript Number:	Ms_IRJGH_110188
Title of the Manuscript:	Profiling Health Indicators: A Study of Protein and Cholesterol Levels among Male Medical Doctors in Aba, Abia State, Nigeria
Type of the Article	Original Research Article

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u>	1. The study titled "Profiling Health Indicators of Male Medical Doctors in Aba, Abia State, Nigeria: A Cross-Sectional Survey on Protein and Cholesterol Concentrations" is well-conducted and contributes valuable insights into the health status of a specific population—male doctors in Aba. Here is a detailed review: 2. Yes 3. Yes 4. Yes 5. Yes 6. Yes	
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?	Yes, Easily understand basic student also	
Optional/General comments	Areas for Improvement: Limited Demographic Information: The study lacks detailed demographic information about the participants, such as age distribution, years of medical practice, and specific roles within the medical profession. This additional information could provide context and enhance the study's applicability. Potential Bias: The use of a convenient sampling method might introduce selection bias, as those who consented to participate may not be fully representative of the entire population of male doctors in Aba. Contextual Factors: While the study emphasizes the importance of future research considering determinants like dietary habits, lifestyle, stress, and exercise, the current study could have benefited from at least discussing these factors to some extent. Generalization: The study focuses specifically on male doctors aged forty and above in Aba, Abia State. Caution should be exercised when generalizing these findings to other populations or age groups.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
