

Review Form 1.7

Journal Name:	Asian Journal of Pediatric Research
Manuscript Number:	Ms_AJPR_110955
Title of the Manuscript:	Achenbach Syndrome In A Male Infant With Brown Discoloration Of Skin: A Case Report
Type of the Article	Case study

## Review Form 1.7

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p><b>Compulsory</b> REVISION comments</p> <p>1. <b>Is the manuscript important for scientific community?</b> (Please write few sentences on this manuscript)</p> <p>2. <b>Is the title of the article suitable?</b> (If not please suggest an alternative title)</p> <p>3. <b>Is the abstract of the article comprehensive?</b></p> <p>4. <b>Are subsections and structure of the manuscript appropriate?</b></p> <p>5. <b>Do you think the manuscript is scientifically correct?</b></p> <p>6. <b>Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</b></p> <p><b><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></b></p>	<p>1. The manuscript detailing a case of Achenbach Syndrome in a male infant with atypical brown discoloration of the skin is important for the scientific community due to its rarity and unique presentation. This case report provides valuable insights into the variations of Achenbach Syndrome, shedding light on atypical symptoms and potential underlying mechanisms. Understanding such atypical presentations is crucial for accurate diagnosis and management of this rare condition. Additionally, the discussion of potential genetic involvement and the need for further research emphasizes the significance of this manuscript in prompting deeper exploration of Achenbach Syndrome and its underlying pathophysiology.</p> <p>2. The title of the article, "Achenbach syndrome in a male infant with brown skin pigmentation: a case report" is appropriate because it accurately reflects the content of the article and represents the unique presentation of Achenbach syndrome in a male infant with brown skin pigmentation. However, an alternative title could be "Rare presentation of Achenbach's syndrome in a male infant: report of a case", which emphasizes the rarity and uniqueness of the case and may attract more attention from the scientific community.</p> <p>3. The abstract of the article is comprehensive as it provides a brief overview of the rare and scantily found medical condition, Achenbach Syndrome, and highlights the unique presentation of the condition in a male infant with brown discoloration of the skin. The abstract also mentions the need for further research in the field and emphasizes the significance of understanding atypical presentations of the condition.</p> <p>4. The manuscript is well-structured with clear subsections such as Introduction, Case Presentation, Diagnosis and Assessment, Follow-up and Outcome, and Discussion. This structure effectively presents the case report, diagnostic process, follow-up observations, and a discussion of the atypical features observed. The clear subdivision of the manuscript into these sections enhances readability and comprehension, allowing readers to follow the case report and its implications logically. Therefore, the manuscript's subsections and structure are appropriate for effectively conveying the information presented</p> <p>5. Based on the information provided, the case report appears to be presented in a clear and concise manner, with a detailed description of the diagnostic process and follow-up observations. The discussion section also seems to provide a thoughtful analysis of the atypical features observed in the case and suggests the need for further research in the field. Overall, the manuscript appears to be scientifically sound and well-supported by the available evidence.</p> <p>6. The manuscript provides a sufficient number of references to support the presented information, and the references appear to be recent and relevant to the topic. The references include studies published within the last decade, and some of them are from reputable journals in the field.</p> <p>1. Achenbach W. (1958). Das paroxysmale Handhämatom [Paroxysmal hematoma of the hand]. Die Medizinische, 52(27), 2138–2140. This is the original paper by Achenbach describing the syndrome.</p> <p>2. Azarfar A, Beg S. Achenbach Syndrome: A Case Series. Cureus. 2022 Mar 3;14(3):e22824. doi: 10.7759/cureus.22824. PMID: 35382203; PMCID: PMC8976592. This is a recent case series that provides additional information on the clinical presentation and management of Achenbach syndrome.</p> <p>3. Ada, F., &amp; Kasimzade, F. (2019). Analysis of 24 patients with Achenbach's syndrome. World journal of clinical cases, 7(10), 1103–1110. <a href="https://doi.org/10.12998/wjcc.v7.i10.1103">https://doi.org/10.12998/wjcc.v7.i10.1103</a>. This is a retrospective analysis of 24 patients with Achenbach syndrome, which provides insights into the clinical features and management of the condition.</p>	

Review Form 1.7

<div>Minor REVISION comments</div> <div>1. Is language/English quality of the article suitable for scholarly communications?</div>	Based on the excerpts provided, the language and English quality of the article appear to be suitable for scholarly communications. The text is well-structured, and the terminology used is appropriate for the medical and scientific context.	
<div>Optional/General comments</div>	<div>For the supplementary article and its acceptance, the author must do the following:</div> <div>Provide a more detailed interpretation of the results: the author should explain his results and observations in detail and use the new and important information presented in the paper.</div> <div>Review of Supplements: If there is still incomplete information about some aspects related to the topic of the article, the author should supplement this information and use valid and reliable sources.</div> <div>Provide suggestions for future research: The author should provide suggestions for future research on Achenbach's syndrome and point to further research in this area.</div> <div>Revising and editing: The author should re-check his article and make sure the necessary edits are made to improve the quality and clarity of the article.</div> <div>By doing this, the author can ensure that the article is ready to be submitted to a reputable scientific journal and accepted.</div>	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
