

Review Form 1.7

Journal Name:	Asian Journal of Research in Surgery
Manuscript Number:	Ms_AJRS_103540
Title of the Manuscript:	A STUDY ON RISK FACTORS ASSOCIATED WITH ANASTOMOTIC LEAKAGE IN GASTROINTESTINAL SURGERIES
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalajrs.com/index.php/AJRS/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p> <ol style="list-style-type: none"> 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>Anastomotic leaks are a major problem in GI surgery Thus data from defferent parts of the World are welcomed Better “ Risk factors of anastomotic leakage in gastrointestinal operations”</p> <p>The aim can be reduced without losing anything to one line and the methods can reduced to half Two or three words about statistics could be introduced In the results significabt risk factors in univariate analysis could be introduced as well all multivariate analysis Finally One or two sentences conclusion is urgently needed</p> <p>In the introduction authors should provide some clues about the known and ambiguous risk factors for leakage. In methods they should provided all the risk factors recorded and finnaly evaluated. Results should provide a table with all risk factors entered in the analysis and the text should contain an intoductory part describing the study population (age, gender, ...) and a part describing the significant risk factors Finally there should be another table with multivariate analysis and a text with the significat risk factors The discussion should explain the findings</p> <p>It seems to be so B Wallace, et al. Evidence according to Cochrane Systematic Reviews on Alterable Risk Factors for Anastomotic Leakage in Colorectal Surgery Gastroenterology Research and Practice 2020 https://doi.org/10.1155/2020/9057963 is a good guide to sum up risk factors Lipska MA, et al. Anastomotic Leakage after lower gastrointestinal anastomosis: men are at a higher risk ANZ J. Surg. 2006; 76: 579–585 Bolívar-Rodríguez MA, et al. Risk factors associated to intestinal anastomotic leakage in elective surgeryCir Cir 2022;90(1):84-89. Sripathi S, et al. Factors Contributing to Anastomotic Leakage Following Colorectal Surgery: Why, When, and Who Leaks? Cureus 14(10): e29964.</p>	
<p>Minor REVISION comments</p> <ol style="list-style-type: none"> 1. Is language/English quality of the article suitable for scholarly communications? 	Language needs polishing	
<p>Optional/General comments</p>
