

**Review Form 1.7**

Journal Name:	Asian Journal of Medicine and Health
Manuscript Number:	Ms_AJMAH_115503
Title of the Manuscript:	A case report of breast Myofibroblastoma: A bad looking benign tumor.
Type of the Article	Case report

## Review Form 1.7

### PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Compulsory</b> REVISION comments  1. Is the manuscript important for scientific community?  2. Is the title of the article suitable?  3. Is the abstract of the article comprehensive?  4. Are subsections and structure of the manuscript appropriate?  5. Do you think the manuscript is scientifically correct? Yes  6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u>	<p>(Yes this case report on breast myofibroblastoma provides valuable clinical information, highlights the diagnostic challenges associated with this rare benign tumor, and emphasizes the importance of histopathological correlation. It would be a valuable addition to the medical literature and therefore deserves to be published.</p> <p>Yes Yes Yes Yes</p>	Thanks for your comments, I made the modifications mentioned in the review.
<b>Minor</b> REVISION comments  1. Is language/English quality of the article suitable for scholarly communications?	Yes	
<b>Optional/General</b> comments	<p>I have reviewed the case report titled "A Case Report of Breast Myofibroblastoma: A Bad Looking Benign Tumor." Based on my evaluation, I believe that this case report deserves to be published. Here are my reasons:</p> <p>1. Relevance: The case report addresses the relevance of using a standardized method, the Breast Imaging Report And Data System (BI-RADS), for reporting breast imaging studies. It focuses on the diagnostic challenge posed by myofibroblastoma (MFB) of the breast, a rare benign tumor, and emphasizes the importance of histopathological correlation in reaching a definitive diagnosis.</p> <p>2. Clinical Significance: The report highlights the potential confusion and mimicry of malignancy that can be associated with MFB due to its clinical, mammographic, and ultrasonographic characteristics. It emphasizes the need for careful evaluation and multidisciplinary collaboration in the diagnosis and treatment of breast pathology.</p> <p>3. Educational Value: The case report provides detailed clinical information, imaging findings (including mammograms and ultrasounds), histopathological analysis, and a comprehensive discussion on the characteristics of MFB. It contributes to the existing literature by presenting a well-documented case and discussing the differential diagnoses of spindle cell lesions of the breast.</p> <p>4. Informed Consent and Ethical Approval: The report states that written informed consent was obtained for the publication of the case report and accompanying images. It also mentions the collection and preservation of written ethical approval, ensuring compliance</p>	

Review Form 1.7

	<p>with ethical standards.</p> <p><b>5. References: The report includes relevant references to support the discussion and provide readers with additional resources for further exploration of the topic.</b></p> <p>In conclusion, this case report on breast myofibroblastoma provides valuable clinical information, highlights the diagnostic challenges associated with this rare benign tumor, and emphasizes the importance of histopathological correlation. It would be a valuable addition to the medical literature and therefore deserves to be published.</p> <p>This case report on breast myofibroblastoma provides valuable clinical information, highlights the diagnostic challenges associated with this rare benign tumor, and emphasizes the importance of histopathological correlation.
