PART 1: Review Comments

Compulsory REVISION comments	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. Why do you like (or dislike) this manuscript? A minimum of 3-4 sentences may be required for this part.		
Is the title of the article suitable? (If not please suggest an alternative title)		
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.		
Are subsections and structure of the manuscript appropriate?		
Please write a few sentences regarding the scientific correctness of this manuscript. Why do you think that this manuscript is scientifically robust and technically sound? A minimum of 3-4 sentences may be required for this part.		
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.		

Review Form 3

Minor REVISION comments		
Is the language/English quality of the article suitable for scholarly communications?		
Optional/General comments	<p>I am sorry that I was not convinced to link the food gap and food insecurity, which is different from low income, to the eating habits of children. As eating habits, some of which may be healthy and others unhealthy, we seek to modify them in several ways, such as nutritional interventions, indicate the possibility of change. But from my reading of the research, I understood that what was meant was food insecurity and the lack of availability of different types of food, so this is an existing situation in which customs have nothing to do, to clarify my point in the following example.</p> <p>If nothing other than rice is available in the children's environment, what else will they eat, and how will we treat this as a habit that can be changed?!!</p> <p>Here, the available alternatives must be shown, even if they are limited, and the extent of the possibility of creating balanced diets that meet the individual needs of children from these available alternatives. Then study the impact of the intervention with nutritional education for these children and their impact by evaluating their nutritional and health status before and after the intervention.</p> <p>In the case of low income or lack of alternatives, the alternatives available in the environment must be shown. There may be cheap alternatives available, but they are not preferable. Here, nutritional education must be done for families and their children, and studies must be done on the impact of education on their eating habits as well as their nutritional status in terms of intake of nutrients compared to their needs.</p> <p>I think the research paper is missing important details Is there evidence that these children's habits were better before the food gap occurred?</p> <p>The research did not mention the adequacy of the daily intake of nutrients compared to the nutritional needs of children according to their age and degree of activity</p> <p>The research did not mention the impact of insufficient nutrition on the health status of these children</p> <p>The research did not mention any of the tests that confirm malnutrition in children as a result of not getting enough food, such as analyzing complete blood pictures, hemoglobin in particular, calcium levels, etc.</p>	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
