

### Review Form 1.7

Journal Name:	<a href="#">Asian Journal of Research and Reports in Urology</a>
Manuscript Number:	<b>Ms_AJRRU_110612</b>
Title of the Manuscript:	<b>A Huge Benign Cystic Lymphangioma of The Epididymis – An Atypical Case of Scrotal Swelling and Literature Review</b>
Type of the Article	<b>Case study</b>

## Review Form 1.7

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments  1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript)  2. Is the title of the article suitable? (If not please suggest an alternative title)  3. Is the abstract of the article comprehensive?  4. Are subsections and structure of the manuscript appropriate?  5. Do you think the manuscript is scientifically correct?  6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.  (Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)	1. Yes.  2.Yes.    3.Yes.  4.Yes.  5.Yes,  6. No	
<b>Minor</b> REVISION comments  1. Is language/English quality of the article suitable for scholarly communications?	1. I don't think I am suitable for evaluating English.	
<b>Optional/General</b> comments	Comments The case report is described about a rare case of lymphangioma in epididymis. The reviewer thinks it is interesting and worth being published in Asian Journal of Research and Reports in Urology. However, there are some concerns for revisions before publishing.  Figure 1—10; Please try to designate each figures at the end of equivalent explanations in the manuscript.  Is the number of figures appropriate to the restriction of the journal? Ten figures are usually too many for a case report.  Some reports suggest sclerotherapy because it is less invasive. Please cite the following articles on the sclerotherapy for lymphangioma, and add small comments about the superiority of surgical excision, such as curability and diagnosis.  • Combined Treatment with Lymphaticovenular Anastomosis and Ethanol Sclerotherapy for Cystic Lymphangioma in a Limb. Plast Reconstr Surg Glob Open. 2022 May 24;10(5):e4348.  • Cystic Lymphatic Malformation with Lymphedema Treated by Lymphaticovenular Anastomosis Combined with Ethanol Sclerotherapy. Plastic & Reconstructive Surgery-Global Open 11(3):p e4871, March 2023.
