

Review Form 1.7

Journal Name:	Asian Journal of Economics, Business and Accounting
Manuscript Number:	Ms_AJEBA_111302
Title of the Manuscript:	The Relationship between Service Economy and Carbon Emissions in Jiangsu Province China and the Influencing Factors
Type of the Article	Short Research Article

Review Form 1.7

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u>	Yes Yes Needs some corrections Yes Yes Some suggested	Abstract has been modified and highlighted in yellow. Relevant references have been added to the end of the article.
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?	Needs some improvement	
Optional/General comments	(1) What are the major issues in the existing methods? Author must explain. (2) What are the main parameters which are tried to improve by the author. (3) Improve the resolution of the figures. (4) Add limitations of the proposed techniques. (5) As paper lacks to include the latest papers, these papers must be added- -KNN and PCA classifier with autoregressive modelling during different ECG signal interpretation -Chaos theory and ARTFA: emerging tools for interpreting ECG signals to diagnose cardiac arrhythmias -R-peak detection in ECG signal using Yule-Walker and Principal Component Analysis -An efficient AR modelling-based electrocardiogram signal analysis for health informatics -Efficient R-peak Detection in Electrocardiogram Signal Based on Features Extracted Using Hilbert Transform and Burg Method	(1) The major issues in the existing methods is the calculation of carbon emissions in the service industry cannot be accurate enough.The relevant data are sourced from the Carbon Emission Accounts&Datasets. (2) The main parameters I tried to illustrate is carbon emissions and economic development of service industry in Jiangsu Province and how the service industry can develop with high quality while saving energy and reducing emissions. (3) The resolution of the figures have been adjusted to the maximum extent. (4)The econometric model used in the article does not have sufficient control variables.

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<u>(If yes, Kindly please write down the ethical issues here in details)</u> No	Agree
