

Review Form 1.7

Journal Name:	Journal of Advances in Microbiology
Manuscript Number:	Ms_JAMB_109998
Title of the Manuscript:	Phytonutrient Screening and In Vitro Antibacterial and Antifungal Properties of Polar and Nonpolar Extracts of Albizia gummifera, Prunus africana, and Combretum molle from Mount Elgon Region, Kenya
Type of the Article	Original Research Article

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p><u>Compulsory</u> REVISION comments</p> <p>1. Is the manuscript important for scientific community?</p> <p>2. Is the title of the article suitable?</p> <p>3. Is the abstract of the article comprehensive?</p> <p>4. Are subsections and structure of the manuscript appropriate?</p> <p>5. Do you think the manuscript is scientifically correct?</p> <p>6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form.</p> <p><u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u></p>	<p>Yes . The use of natural products as lead for the treatment of various diseases</p> <p>Yes</p> <p>Yes it explains the Importance and results of work</p> <p>Yes</p> <p>Yes</p> <p>Yes</p> <p>Yes</p>	<p>Comments appreciated.</p>
<p><u>Minor</u> REVISION comments</p> <p>1. Is language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p><u>Optional/General</u>Comments</p>	<p>The Reason for choosing only four solvents for study.</p>	<p>We used these four solvents because they have varying polarities. Since different compounds in a plant extract have different solubility characteristics, this means that some solvents are better suited for extracting certain compounds than others. Based on this, we used these solvents to be able to extract a wide range of compounds from each plant and identify the most effective solvent for compounds with antimicrobial characteristics.</p> <p>Only four solvents were used in this study because of the limited resources and, using too many solvents would have been time-consuming without necessarily leading to more effective antimicrobial extracts.</p>
