Editor's Comment:

This paper is titled "Computational Nonlinear Dynamics: Analysis and Assessment in Optimal Control of COVID-19 in AkwaIbom State, Nigeria" is very interesting. The increasing number of COVID-19 cases requires a control strategy to control the COVID-19 outbreak. Furthermore, it is necessary to use mathematical modeling to determine the spread of COVID-19 infection and whether the control measures are effective.

The author addressed the main concerns from the reviews, the revised version of the manuscript appears to be good. It looks READY for publication.
