

Review Form 1.7

Journal Name:	Journal of Advances in Microbiology
Manuscript Number:	Ms_JAMB_110301
Title of the Manuscript:	Assessment of Airborne Microbial Composition and Antibiotic Susceptibility Profiles in Dumpsite Environments within Rivers State University
Type of the Article	

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. (Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)	 1. Yes, it is important as the work could reveal the multiple links between the human, animal and environmental compartments that allow not only movement of the bacteria but also of mobile genetic elements (MGEs) and the drugs themselves. 2.The title may be more suitable if it is “Microbiological quality of Air/atmosphere Around Dumpsite Environment within Rivers State University” 3. Yes. 4. Yes 5. Yes, I think the manuscript is scientifically correct because it followed microbiological methods and results has been properly described, discussed and written up. 6. References may be sufficient but some relevant references on one health approach linking the environment with animal and human health could be added in this manuscript:- e.g. Woolhouse <i>et al.</i> 2015, Pokhare <i>et al.</i>	 Thanks for your observation. Thanks for your suggestion but we would like to maintain our topic as it covered both the microbiology of the air and the antibiotics susceptibility pattern Thanks.
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?	Then English used in this manuscript is excellent but there are few typographic errors here and there the author should go through e.g. I have heighted a few of them in the text, for example the reference Fowoyo & Igbokwe, 2014 is repeated in the list.	
Optional/General comments	This is an excellent work that shows the need of one health approach in controlling microbial pathogens that may be transmitted from environment to humans or to animals or the reverse interactions.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
