

Review Form 1.7

Journal Name:	Asian Journal of Pediatric Research
Manuscript Number:	Ms_AJPR_111521
Title of the Manuscript:	Impact of air pollution from the Libreville landfill on children aged 3 to 11 years. Comparative study of children living in the vicinity versus children living far.
Type of the Article	Case Control research Article

[Review Form 1.7](#)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments 1. Is the manuscript important for scientific community? (Please write few sentences on this manuscript) 2. Is the title of the article suitable? (If not please suggest an alternative title) 3. Is the abstract of the article comprehensive? 4. Are subsections and structure of the manuscript appropriate? 5. Do you think the manuscript is scientifically correct? 6. Are the references sufficient and recent? If you have suggestion of additional references, please mention in the review form. <u>(Apart from above mentioned 6 points, reviewers are free to provide additional suggestions/comments)</u>	Yes Yes Yes Yes Yes Yes	
Minor REVISION comments 1. Is language/English quality of the article suitable for scholarly communications?	Yes	
Optional/General comments	<ul style="list-style-type: none">• More details could have been provided on the study locations and population demographics. Information like population density around the landfill and control sites would be useful.• The air sampling was done only on three days. More extensive sampling over multiple seasons would better characterize exposure over time.• Possible information bias from self-reported health outcomes in the past year. Medical records validation would strengthen the outcomes assessment.• The cross-sectional design assesses associations at one point in time. A longitudinal cohort study would better establish temporal relationships between exposures and outcomes.• The groups differed significantly in socioeconomic status which could confound the associations with landfill exposures. Statistical adjustment helps but does not fully control for this.• Conclusions regarding causation are too strong given the observational study design. Language should reflect associations rather than definitive causal claims.• Overall, this is a well-designed and implemented study that provides useful evidence on the health impacts of landfill exposures on children. Some limitations could be addressed with a more robust study design and methodology. But it makes a valuable contribution to the environmental health literature.
