

Editor's Comment:

I studied closely manuscript 2023/SAJSSE/111126 the material you sent me. My editorial decision is to publish as is with minor changes,

I suggest revised title: ``Statistic Examination: Role Public Awareness and Preparedness to Reduce Fire Outbreaks in Public Markets in Tanzania".

The article is an impressive research article. The article is well-written, most interesting and important. The authors' main conclusions make good common sense to me.

The result indicates that attitudes have positive and significant effects on prevention intention on outbreaks of fire in public markets. This study finds that the attitudes increase effectiveness response efficacy thereby enabling mutual responsiveness to provide support during fire incidence. Becoming familiarized with the knowledge requires the appropriate frequency of training and enhancement of the staff's awareness of fire prevention and emergency response, which is the most important key to learning effectiveness. Based on the findings in the current study confirms that attitudes moderates' relationship between individual response efficacy and prevention intention on outbreaks of fire in public markets.
