

Editor's Comment:

This revised manuscript (No. Rev-Ms-AJBGMB_88491) requires further revision with editing based on the following discrepancies (such as typo errors having no space bar/s, grammar, spelling and others - mistakes) throughout the manuscript.

Few examples are mentioned below:

1. The title of the manuscript would be reframed as "Evaluation of effective antiplasmodialleaves"
2. *falcifarum* would be corrected as *falciparum* throughout the manuscript
3. ml would be represented as mL throughout the manuscript
4. In abstract, suggests instead of suggest; extracts instead of extract; "All the extracts show" instead of "All the extract shows"
Keywords may be represented as Anti-plasmodial activity; GCMS; *Senna occidentalis*
5. In Introduction, 2.6 Determinationmethod, Giemsa instead of Geimsa
6. In 3.1 Results
Colour may be represented as color
Anti-plasmodial properties.....Table2, positive instead of Positive; 'on' would be deleted.
93.75% instead of 93.75
In Table2, p-value, SD/SE and sample nos (n) should be mentioned for statistical significance in the legend, as well as method used for statistical analysis in the Text.
Table3 would be reframed as the values are scattered.
7. In 4.0 Conclusion, needed few grammatical rectifications:
possesses instead of possess
show instead of shows
has instead of have
were instead of was.
