

Editor's Comment:

Major deficiencies are found in the manuscript The manuscript has been rejected

- 1) The manuscript has been presented as rare case of Tibial hemimelia as congenital anomalies but has not been reviewed or written up as original article format, and the matter does not fall into the category.
- 2) Pictures/x-rays and tables and legends need to be presented in the format requested by the AJOR online guidance for authors.
- 3) The manuscript has no additional research details as the title claims in discussion of the challenges and limitations in the developing countries.
- 4) **Green** highlighted texts are grammatical error examples, and these as well as many others that need to be corrected by authors.
- 5) **Red highlighted** are scientific incompatible errors making the manuscript poor quality, from previous review are persistent although not marked again, and authors are recommended to refer to the same

Major deficiencies are found in the manuscript that does not permit publication under original article, and we recommend a proper write up as case report and discussion pertinent to the authors management category and submit with very specific data to their cases as exclusive article.
