

**Editor's Comment:**

**"Anthelmintic activity, antioxidant activity, phytochemical profile and microscopic features of *Cassia alata* collected in the Democratic Republic of Congo (RD Congo) "** for giving a final decision. Indeed, this is a wonderful piece of original research that determines the phytochemical profile of *Senna alata* LINN using chemical screening in solution and thin layer chromatography, and also assesses the antioxidant and anthelmintic activities of the plant's aqueous extracts. While reviewing the manuscript, I found that the authors have done good jobs during revisions as well as improved the manuscript based on the comments/suggestions by the expert reviewers. However, there are still some places where wordings and sentences are not grammatically correct, which are required to be corrected as well as overall English need to be improved. In addition, "(RD Congo)" should be removed from the title of the manuscript. Hope, you will agree with my suggestions/recommendations.
