

**Editor's Comment:**

After reading the manuscript and reviewers' comments I found out that although the authors state that they proceeded to all necessary changes according to reviewers' suggestions, this is some parts is no true. One of the reviewers marked (in his own words) "The method of measuring anther width may be provided in materials and methods. Also, the formulae for the index mentioned be provided" but I do not see such details in the manuscript.

Before been accepted for publication, a point to point response to the reviewers' comments is prerequisite.
