

Editor's Comment:

Soare Rodica's views were not taken into account by the authors. The reviewer is right in her criticisms. Also, discussion is so weak, and resources are insufficient. I have attached an article to enrich the manuscript. Authors should enrich the manuscript with these and similar articles.

Suggestions and recommendations for authors

To be added at the working method

-details of soil and climate conditions in the experimental area.

-the origin of tomato genotypes and their variety (determined or indeterminated growth)

-applied works?

The conclusions chapter is missing !!!

In addition, they should be improved:

Which genotypes showed a better correlation??

References according to the guide.
