PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Although the concept is interesting, the data presented are too few. Strengthen the manuscript.	The information or data are three-enzyme assay, lipid peroxidation and liver/pancreatic histology which I think enough for the nature of my paper.
Minor REVISION comments	Since the animal experiment involved in the manuscript, the authors to provide the clear ethical committee clearance for the experiments. The manuscript can be accepted after major revision and ethical committee clearance certificate.	My institution approved the research but there was no ethical certificate issued. Also as stated in the methodology, all the experimental procedures were carried out in accordance with the ethical guidelines for laboratory animals and complied with the guide for the care and use of laboratory animals (National Research Council, 2011.)
Optional/General comments
