## Review Form 1.6

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The topic of this paper is interesting, and the research is valuable. However, there are some grammar errors shown in this paper. I have already revised the Abstract and some parts for the author. I hope the author can revise the remaining parts. I recommend the software Grammarly. It can revise some fundamental grammar errors in your paper. A good journal should be written in a very professional scientific thinking and language, so I recommend the author organize the whole context logically and revise his paper according to some reputational SCI journals (with high impact factors).	Thank you so much your contribution, your opinion has responded to appropriately.
<b>Minor</b> REVISION comments	<ul style="list-style-type: none"><li>For all the Figures in this paper, please explain why these figure needs to be shown in this paper. For example, in Figure 1, two "I" shape symbols are shown at the top of the histogram.</li><li>Please explain a bit of this. The resolution is also an essential factor in improving the paper acceptance rate for a high-quality paper. (1) When adding notation (words, numbers) on an original paper, it is better to be edited in a Microsoft software (PowerPoint or Word) and group them. Then, insert to the Microsoft Word. In this way, the resolution of the notation shown on each picture will have the same resolution as the words in this paper.</li><li>(2) For all Figures, it is better to use Microsoft Excel to generate the figure then import it to Word. Because the software of Microsoft has better compatibility, the format of the Figures in this paper is a little messy. Therefore, I recommend the author can change all the formats of Figures in this paper.</li></ul> <p>The author cites specific references in his paper.</p> <p>The organization and the language of a good journal are critical. So please revise the language a little bit and reorganize the paper if the author has time.</p>	<ul style="list-style-type: none"><li>The two I shape symbols on the bars are called error bars. While the histogram represents the mean values, the error bars represent the standard deviation. The longer the error bars, the higher the level of inconsistency of the values that combine to form the mean.</li><li>The approach described was explored create my figures. However, more efforts will be invested in improving the quality of the figures.</li></ul>
<b>Optional/General</b> comments	N/A.	

### PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
