PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Knowing the risk factors, presentation, complications and imaging characteristics of retained surgical sponges is vital for early detection of this serious problem. This case report of surgical sponge remaining in the abdomen, risk factors, presentation, complications and imaging characteristics of these forgotten surgical sponges is vital for the early detection of this serious problem. In this respect, it is a very important study. In addition, this study was well designed. The sources and images used are sufficient. In my opinion, it is a case report suitable for publication in your journal	. Thank you for your kind comments.
Minor REVISION comments	Check all references	We have checked the references.
Optional/General comments	Add the following references Auger M, Olin S, Morandi F. Novel CT Features of an Abdominal Gossypiboma in a Female Dog. Case Reports in Veterinary Medicine. 2019 Jun 24;2019. Alemu BN, Tiruneh AG. Gossypiboma: a case series and literature review. Ethiopian journal of health sciences. 2020 Jan 1;30(1).	Thank you for your suggestions. We have added references to "Alemu BN, Tiruneh AG. Gossypiboma: a case series and literature review. Ethiopian journal of health sciences. 2020" Jan 1;30(1) as highlighted in the edited manuscript. In regards to the article by "Auger M, Olin S, Morandi F. Novel CT Features of an Abdominal Gossypiboma in a Female Dog. Case Reports in Veterinary Medicine. 2019 Jun 24;2019", we have read it and found that it is a very interesting article. However, we decided not to add this to the references as in this case report we would like to focus more on the imaging findings of gossypibomas found in humans.
