Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>General</p> <ul style="list-style-type: none"> I found this study below the standard. So many problem identified from abstract to the end . I strongly recommend author to reconsider before it is submitted for publication. <p>Abstract Required to be written in standard form</p> <ul style="list-style-type: none"> Tell us here sample participant in the study as well as , who exposed for new project (RECONNECT) . i.e expermental and control groups . as an expermental procedure . the abstract is vague in this context . author need to refin the abstract in the way it provide highlight of what is done . «Politics and Governance « Still at this instance it is difficulut for reader to understand what « politics and Governance» mean unless he/she is in Philippine. Author need to provide hint on it. <p>Method There are several things the author need to consider here in method section :</p> <ul style="list-style-type: none"> The nature of the course taught is not clear , As reader I am not clear the issue Philippine Politics and Governance of “below expectation” Politics and Governance is it a course , we do not know philippines education system so author need to explaine such things indeteil. It is a kind of expermental study as students are exposed to new situation « project RECONNECT» so it should be explaind variables under the study . the dependent and the independent variables shall be explained properly. <p>Sample</p> <ul style="list-style-type: none"> Author selected 7 students for the study as sample from two section , however we do not know the total population in two section . <p>Result and Descussion</p> <ul style="list-style-type: none"> Now it becomes hard to understand this study inmy self I am expecting , the result of 7 students selected as sample (see method section) Table1 , tabl2 etc presented here indicating the entier Grade 12 pre-test post –test . I am not clear what is going on here .Tables are not also explanatory . How many students are participated here in the result section which are not stated in method section !!!! <p>Discussion</p> <ul style="list-style-type: none"> The result of the study only associated with one study Nejezchleb, 2020 which is focused on pandemic . So no discussion in the study. The author need to include Discussion section 	<p>General</p> <ul style="list-style-type: none"> Thank you for the comments. Your comments are highly appreciated for the improvement of this research. Also, I replaced the type of the article from original research article to short research article. Just to clarify, the submitted manuscript is an example of action research. In the Philippines, teachers are encouraged to do school-based or class-based action research to address education issues within our classes or within our school. <p>Abstract</p> <ul style="list-style-type: none"> Sample participants in the study will be included. The author will refine the abstract. Hint will be provided here. Example: The study aimed to improve the assessment performance of Grade 12 students in a specialized course/subject under the Academic Track/Humanities and Social Sciences (HUMSS) Strand called Philippine Politics and Governance. <p>Method</p> <ul style="list-style-type: none"> The nature of the course will be stated clearly. In Philippine education, a student is considered “below expectation” if he/she got 74% and below in assessment performance after 4 weeks of lessons. The study is not an experimental study. The research utilized a descriptive-comparative method of research. Project RECONNECT is an intervention program through tutoring to help students to pass the subject/course Philippine Politics and Governance. <p>Sample</p> <ul style="list-style-type: none"> The total population in two sections of Grade 12 will be included. <p>Results and Discussion</p> <ul style="list-style-type: none"> The researcher will improve the presentation of the table. The number of participants will be stated in the method section. <p>Discussion</p> <ul style="list-style-type: none"> The author will also include additional study related to the research study.
Minor REVISION comments
