Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	<p>Your manuscript has too many pages (48 pages). Most scientific articles only range from 8 to 16 pages. Therefore try to reduce the number of pages of your Article. Unimportant and less important descriptions should be deleted. Thank you.</p> <p>Note: Please study the manuscript draft format from AJESS (Asian Journal of Education and Social Studies), follow the maximum number of pages allowed.</p> <p>In the Article Title</p> <p>The Article's title shows the main content and purpose, is short, informative and straightforward and captures the reader's attention. A short title is generally 7 to 12 words. Please consider revising the title of your Article.</p> <p>In the Abstract subsection</p> <p>(a) The abstract subsection generally contains the research background, research objective, research method, and research findings (explicitly stated). Please complete it.</p> <p>(b) The number of words in the abstract is limited, generally 150 words to 250 words. Please adjust the maximum words in the Abstract in your manuscript not to exceed the general normal limit and adjust it to the AJESS journal template format.</p> <p>In the Introduction subsection</p> <p>(a) The main research objectives need to be explicitly disclosed in the introduction subsection. Please complete it.</p> <p>(b) The further writing structure of the manuscript should be illustrated in the last paragraph of the introduction. Please consider adding it.</p> <p>(c) In the Introduction subsection, it is necessary to discuss related works from previous researchers (Related works must demonstrate that previous related works differ from your current research). So you show that your Article has the power and novelty of research that has never been studied before. Please add it</p> <p>In the Conclusion subsection</p> <p>In the Conclusion subsection, authors no longer need to conduct other discussions except discussing the results of the research (answering the problem formulation or research objectives), the novelties found from your research results, and suggestions for further study.</p> <p>Please revise it.</p> <p>In the References subsection</p> <p>(a) Journal references are dominated by old references, (journal references should use the latest journal references under the last 5 years). It's better to just delete references that are over 15 years old and over. Note: also consider adding new references that are not yet 5 years old.</p> <p>(b) Consider removing references [13], [14], [15],[17, [22-24]. [29]]and [53-56], or replacing them with references to other sources because these references are not suitable to be used as reference sources in reputable scientific journals (Please cite books or articles that are the results of research published in scientific journals or proceedings)</p>	<p>What you are saying is correct sir. Only, it is presented in this work the result of the observations made in relation to the practices of academic orders in Cameroon. Many disturbing facts emerged and constitute relevant results to be used not only in Cameroon, but also in all countries falling into such difficulties. In this sense, if we consider as an example the pages ranging from 10 to 18, there is presented the content of the programs of the subjects selected within the framework of this work. So what you see there are results. At the same time, they induce the beginning of the proposal which is discussed here, in particular the implementation of the interdisciplinary evaluation approach. It aims to bring everyone to realize that a reorganization of programs is possible, with the aim of bringing together the different pedagogical departments around the same themes. We could then break down the barriers that have always existed between the pedagogical departments in the educational system of Cameroon, thus delivering young people to idleness at the end of their academic course.</p> <p>The title is arranged</p> <p>The abstract too is corrected</p> <p>The introduction is corrected</p> <p>The conclusion is readapted</p> <p>Concerning the references subsection, I really think that it is always important to use old and new references for a better chronology of the discoveries. Then, according to me, this makes wider the possibilities of discussing the different results and avoid working on a topic published years ago.</p>
<u>Minor REVISION comments</u>		
<u>Optional/General comments</u>
