PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Why did you conduct this study? (Aim of your study) How many and which types of articles did you reviewed for this study? (materials and methods) Conclusion: mention the theme of interrelationship between study variables.	Answer: I have reviewed over a thousand articles in the English language. Since this is not a systemic review, a formal material and methodology is not done and is not included. A systemic review with distinctions made of the findings of each study would make this manuscript too long and not serve the purpose of the narration. This manuscript provides an overall narrative review of the interrelationship between loneliness and lifestyles and the potential worsening impact of COVID-19 pandemic on loneliness.
Minor REVISION comments	Relationship between studies variables are not clearly described on study. Each variable explained clearly but couldn't show their relationship clearly.	
Optional/General comments
