

Review Form 1.6

Journal Name:	Asian Journal of Research in Biochemistry
Manuscript Number:	Ms_AJRB_84213
Title of the Manuscript:	HEPATO-PROTECTIVE EFFECT AND LIPID PROFILE OF HONEY ON ALLOXAN-INDUCED DIABETIC RATS
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>In your results, the figures are not commented; add comments to make it easier for readers to understand.</p> <p>Review references according to the guide for authors: References must be listed at the end of the manuscript and numbered in the order that they appear in the text. Every reference referred in the text must also be present in the reference list and vice versa. In the text, citations should be indicated by the reference number in brackets [3].</p>	Agreed and corrections has been implemented.
Minor REVISION comments	<p>Abstract Part: Descriptive details needed in the methodology and not in the abstract . If possible delete and reformulate the method part of the summary so as to highlight the evaluation of the hepatoprotective parameters as well as the lipid profile which are not mentioned in this part although they are an integral part of your objective. It is not necessary to specify here the duration of induction of diabetes; otherwise also specify the duration of treatment of the rats with honey. In keywords, delete "bilirubin" as it's redundancy since you are quoting liver function.</p> <p>In paragraph 3 of the part 1.Introduction, put the reference if possible for the part: "Several studies have shown that honey can be used as an antioxidant anti-inflammatory; wound healing, and recent research showed that honey has anti-diabetic effects." Same remark for the next sentence in the 4th paragraph.</p> <p>In part 2.1., you do not specify the sex of the animals used. Specify whether they are male or female rats.</p> <p>In part 2.3, The number of doses of alloxan monohydrate used per rat as well as the duration of induction of diabetes are not mentioned; If possible specify them.</p> <p>Still in part 2.3. ,What is the mode of treatment used: is it the curative mode? or the induction of diabetes and the treatment take place simultaneously. Specify if possible.</p> <p>Revise numbering 2.6 and 2.7 for consistency.</p> <p>In the paragraph 2 of part 4.Discussion, conjugating the verb "can" in the conditional in the differents sentences.</p> <p>In the part 5. Conclusion, you do not highlight the effect of honey on blood sugar which seems to be the most important in your study.</p>	Agreed and corrections has been implemented.
Optional/General comments	Nil
