PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|--|---|
| Compulsory REVISION comments | | |
| Minor REVISION comments | <p>The researcher, with the assistance of trained research assistants, conducted the survey to the college student-respondents who were buying foods from the various food stalls and establishments in the campus with the used of the questionnaire. Senior high school to senior college students were considered in this study. ***those who partook in the study are they solly university students or both Senior high school to senior college. If both then the title of the paper and most of the test should be edited accordingly.</p> | <p><i>In our university, Senior High School students are also enrolled. Hence, they took part in this study so as the college students.</i></p> |
| Optional/General comments | <p>This study tried to establish the relationship between the food consumption pattern, health and safety, and knowledge on the basic food groups among college students in the University of Eastern Philippines Main Campus. Its aim is to determine the respondents' food consumption pattern as to breakfast, lunch, dinner, and snacks; their level of knowledge on the basic food groups (glow, grow, and go); their assessment on health and safety; and their level of knowledge on the basic food groups and their food consumption pattern. The descriptive-correlational method of research was utilized employing a modified questionnaire-checklist patterned from the instruments of the Cumbria County Council and the DOST Food Nutrition and Research Institute. The findings showed the food consumption pattern of the student-respondents significantly affected their assessment on the health and safety of the food services of the food stalls and establishments. The level of knowledge of the student-respondents on the basic food groups has a significant correlation on their food consumption pattern. In conclusion, the food consumption pattern of the student-respondents significantly affected their assessment on the health and safety of the food services of the food stalls and establishments.</p> | <p><i>Thank you for the comments.</i></p> |
