

Review Form 1.6

Journal Name:	European Journal of Nutrition & Food Safety
Manuscript Number:	Ms_EJNFS_83988
Title of the Manuscript:	A review of the role of selected bioactive compounds and micronutrients with immune-enhancing activity on the prevention and mitigation of SARS-CoV-2
Type of the Article	Review Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>abstract In the abstract, it is better to explain specifically the types of bioactive compounds and micronutrients such as phenol compounds, vitamins (a, b9, C, E etc.), minerals (iron, copper)</p> <p>Discussion If possible, the recommended amount of consumption (dose) of each bioactive compound and micronutrient is explained.</p> <p>especially iron, because in the text it is explained that if iron can be excessive it can have a negative impact.</p> <p>Conclusion it should be explained that iron consumption needs to be controlled. lack of iron the effect is if excessive the effect is</p>	<p>✓ Specific types of bioactive compounds and micronutrients are given in brackets in the abstract.</p> <p>✓ If the recommended consumption amount (dose) of each bioactive compound and micronutrient is written, the article becomes too long and it is necessary to add about 50 references. The daily intake doses of micronutrients are given in different amounts in the literature according to gender, age, disease status and type of the individual. Therefore, we avoided giving the daily intake for these micronutrients. For example, if we were to give this just for vitamin A (subunits and analogues), we might have to write at least one page. However, the recommended daily intake for iron has been added to the relevant section.</p> <p>✓ In the conclusion, it was emphasized that iron consumption should be taken under control.</p>
Optional/General comments
