<u>Compulsory</u> REVISION comments	<p>Intercropping cultivation is a topical subject and has its great advantages in conditions of sustainable and organic production. The choice of crops is interesting - barley and sugar beet, and also the factors (N-levels and cuts).</p> <p>The conducted study is in-depth, multivariate (27 variants) and includes determining a number of traits and parameters – yield and yield components, quality, competitive relationships and aggressivity, land use ratio, economic evaluation. It should be emphasized that such experiments are very time consuming.</p> <p>All data obtained are well presented, thoroughly analyzed and in the light of previous studies.</p> <p>Overall, I give a high positive assessment of the article, but I have some questions and remarks that are indicated directly in the text.</p>	<p>Done</p> <p>Checked</p>
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
