

Review Form 1.6

Journal Name:	International Research Journal of Gastroenterology and Hepatology
Manuscript Number:	Ms_IRJGH_83196
Title of the Manuscript:	Gastro protective effects of Tadalafil on ethanol- induced and reserpine –induced gastric ulcer in rats
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://journalirjgh.com/index.php/IRJGH/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none">➤ Without Negative control test it will be difficult to minimize the confounding effect of stress to the rat during test drugs administration. It is also difficult to compare and contrast the test drug with the positive control only.• Negative control group should be done➤ Additional parameter measurements like mucus content, gastric acidity measured <p>The introductory part is too short so please add more information supporting the area of your research.</p> <ul style="list-style-type: none">➤ Grammatical errors should be edited <p>On the discussion part</p> <ul style="list-style-type: none">➤ The two consecutive sentences should be referenced both are from different articles.➤ You should discuss the results of the findings in relation to the scientific facts.➤ From the results table different doses of the test drug produce different effects from the Ethanol-induced model TAD 50mg/kg reserpine induced model TAD 200mg/kg produced significant effects compared to the positive control, so you should discuss the possible reason for this discrepancy; as a common fact as the dose increases, the effect also increases.	<p>The research study, as a way of investigating the proposed effect of Tadalafil on gastric ulcer, basically made the comparison on a standard Gastro protective agent being Omeprazole.</p> <p>Mucus content and gastric acidity were not part of the parameter assayed for this particular aspect of the research work.</p> <p>Every other observations and corrections will be effected.</p>
	Topographical problems. Please edit the whole document to justified form. Group 1- 3 received Tadalafil (50, 100 &200mg/kg) + Ethanol (1ml /200g) It is confusing to readers so please correct it	
Optional/General comments	The research idea was very good, but literatures reviewed and parameters measured are not enough. It will be better if major revisions made to this aspects.
