PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	At certain places, repetitions of words are there. Please avoid this. While applying the doses, results and treatments are plotted, specify the mean/average for each bar in charts. The comparisons can be making out, otherwise it is confusing. Best include descriptive statistics with modern statistical tools like ANOVAs for your experiment to explain further with clarity and reasoning.	All repetitions have been corrected. The charts were plotted from descriptive and inferential data gotten from Mean + SD and ANOVA/Tukey's multiple comparison test.
<u>Minor</u> REVISION comments	Kindly update the literature review in the paper. Please understand that without proper literature support Journal may find difficult in explaining your NEW findings. 😊	Literature: every aspect of the study has been taken care of in the introduction.
<u>Optional/General</u> comments	Physiological and Psychological behaviour of rats will also be discussed in terms of quality.	Only biochemical changes were measured and reported.

PART 2:
