PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none">Detail of questionnaire may be given in brief. Instead of including process of administration and scoring, standardization properties (validity, reliability etc.) should be given.Relevant socio-demographic characteristics of participants should be given.It is not mentioned why only 40 married participants were selected whereas in another group there were 80 participants.It should be specified why non-parametric statistics was used.“Difference between genders on levels of anxiety<ul style="list-style-type: none">Mann-Whitney test indicated that females showed higher levels of depression more than males M=57.48 U=1618.5, p=.340.” Please correct as heading is for anxiety and text is related to depression.References are only up to 2017. Findings of latest research should be added.	<ul style="list-style-type: none">Thank you details of questionnaire have been shortened in the text (Methods sectionWe collected only age and gender of responders due t keep confidentiality of participants.It was a group of young adults and the group was formed not randomized form.Normality test (Kolmogorov Smirnov) showed, that data are non parametric, so Mann-Whitney test was applied to compare groups and Spearman test was used for correlational analysis. We have updatet it in the textThank you very much for the comment, it is now corrected in the textWe have added more references providing novel data at discussion section.
Minor REVISION comments		
Optional/General comments
