### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<b>Cancer is considered one of the diseases that spread in the present time, so the research that deals with this disease is many and useful. This research did not include important points in his work, but it was a statistical work only, as it did not address the causes of the disease and link them with each other and reach a solution to this problem. Rather, it was a general work with all its details.</b>	Our study utilized the data on cancer diagnoses reached in females over a 20-year period to draw attention to the magnitude of the problem of cancer among Nigerian females. An investigation of the causes of these cancers was beyond the scope of the set objectives of our research. We went on to proffer possible solutions to stem the trend, and our suggestions were centred on grassroots approach.
<b>Minor</b> REVISION comments	The REFERENCE are old .	
<b>Optional/General</b> comments	The idea is not bad, but the application is not good	

### PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Are there ethical issues in this manuscript?</b>	<u>(If yes, Kindly please write down the ethical issues here in details)</u>	There were no ethical issues with this study, as it was conducted in retrospect using data on cancer diagnosis retrieved from departmental records, without compromising the identities of the patients.
