PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none">• Please remove all bold words within the text and references.• Stage I is in a different font to the rest of the text please change• Would be useful to address relative tobacco consumption etc with cognitive scores as would it be good to relate the metabolic syndrome (which these patients often have) with cognitive impairment as there are good links to this in the literature• While the discussion is good the first bits are superfluous particularly where you re-present large swathes of data. It would be useful to try and discuss more about interventions you could use upon detecting cognitive impairment in this population, are there possible confounders to this i.e. dietary restrictions because they smoke B12, folate etc	Noted and corrected
Minor REVISION comments	It would be nice if you offered some epidemiological statistics on COPD in your geographical location and a feeling of global prevalence rates etc.	Revised
Optional/General comments
