PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The author(s) did not provide any information on the statistical test used to determine the significant difference between the Regular and Irregular Menstrual groups. This study did not show that “a significant association exists between the stress (emanating from the COVID-19 pandemic) and menstrual irregularity”. They only demonstrated that a significant difference existed between the reported stress levels of the two groups. In order to claim that the stress levels actually affected the menstrual cycles of these women the study would have to have exercised some control on the stress levels of the women in one group versus the other.	The statistical test have been mentioned in the study. Moreover, the conclusion section is rephrased.
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
