General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journaljsrr.com/index.php/JSRR/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none">- The topic is very important and interesting and its results are valuable.- The research design did not mention in this research report.- Ethical consideration such as ethical approval, informed consent, anonymity, and data confidentiality has to be included as part of the research methodology.- Discussing the results and comparing them with the results of previous studies should be written in a separate section entitled "Discussion" after the results section directly.	<ul style="list-style-type: none">-The research designs used were descriptive statistics, Prevalence, and Correlation.- the respondents were anonymous and they understood the survey was for contribution to knowledge and they all participated willingly-the results and discussion were seperated
Minor REVISION comments	<ul style="list-style-type: none">- It would be better if the researcher describe the items of tool used in data collection, the scoring system if present, and its validity and reliability.- The numbering of the parts of the research report needs to be revised.	<ul style="list-style-type: none">- The data collection tool was an interview done using questionnaire that contained open-ended and closed ended questions and the questions were sourced from Nigerian Demographic and health survey 2018
Optional/General comments	The researcher mentioned "WASH disease" without definition, so I suggest adding the operational definition of this abbreviation in the research report.	WASH diseases are water sanitation and hygiene diseases, there are diseases caused by unsafe water, poor hygiene and sanitation, causing diseases such as diarrheal, Typhoid fever and Cholera.

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)	None, there are no ethical issues.
