

Review Form 1.6

Journal Name:	South Asian Journal of Research in Microbiology
Manuscript Number:	Ms_SAJRM_86011
Title of the Manuscript:	EFFICACY OF NEWLY EMERGING DETERGENTS, LAUNDRY BLEACH, AND TOILET SOAP AGAINST BACTERIA ISOLATED FROM FAIRLY USED CLOTHES, MALE /FEMALE UNDERWEAR
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalsajrm.com/index.php/SAJRM/editorial-policy>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1-The abstract must cover the work. You should summarize it to 350 words. 2-The name of all microbes must be written in italic form. 3- introduction must be harmonic with the topic, and must be abbreviated. 4-in pour plate method, the volume of inoculum ranges from 0.1 to 1 ml not 0.5 µl. 5-in the step of culturing, he states that culturing was followed by measuring the inhibition zone and no detergent or soap is adding. In addition, antimicrobial screening carried out after isolation not with isolation. 6-identification of bacterial isolates by macroscopic or microscopic is good. 7-Also the biochemical characterization of bacterial isolates was done in good way. 8-show the pictures of antibiotic sensitivity test by well and disc diffusion agar. 9- please, check the references 10- add number of each page.	1. To summarised the astract, may be a little difficult , in orther to cover salient points. 2. The name of all microbes must be written in italic form- Done. 3. introduction must be harmonic with the topic, - Done 4. in pour plate method, the volume of inoculum ranges from 0.1 to 1 ml not 0.5 µl.- Done. 5. in the step of culturing, he states that culturing was followed by measuring the inhibition zone and no detergent or soap is adding. In addition, antimicrobial screening carried out after isolation not with isolation.- Done 6. show the pictures of antibiotic sensitivity test by well and disc diffusion agar-Done 7. please, check the references – Done
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
