## Review Form 1.6

| | |
|---|---|
| Journal Name: | **Asian Journal of Case Reports in Surgery** |
| Manuscript Number: | **Ms_AJCRS_83979** |
| Title of the Manuscript: | **GASTRIC SCHWANNOMA: CASE REPORT AND LITERATURE REVIEW** |
| Type of the Article | **CASE REPORT** |

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty'**, provided the manuscript is scientifically robust and technically sound.
To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(https://www.journalajcrs.com/index.php/AJCRS/editorial-policy )

**PART 1: Review Comments**

| | **Reviewer's comment** | **Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)* |
|---|---|---|
| **Compulsory** REVISION comments | There are significant grammatical mistakes which need to be rectified before final acceptance.<br>E.g.<br>**Kindly rephrase sentence in introduction**<br><br>They account for about 0.2% of all gastric tumors and are the most common site within the GIT<br><br>**Instead of writing that "it is usually diagnosed by histopathology ", they should write that histopathology is gold standard/ a definite diagnosis is given on histopathology .** | |
| **Minor** REVISION comments | When author describes the FNAC findings, it has been commented that mitosis were high... however in Histopathology they write that it was low. This poses as a discrepancy. Similarly in discussion part, they claim that CECT can easily differentiate between schwannoma and GIST, however in their case it was not diagnosed, hence please rephrase this also. | |
| **Optional/General** comments | Good article, accept after revisions | |
