PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	• **This is a clinically important presentation of a condition that requires a high index of clinical suspicion which if missed can be proved to be catastrophic** • **Although the clinical information is relevant, a serious consideration for the grammatical construct including adherence to medical terminology should be maintained to avoid losing the impact of the article.** • **I would refrain from using statements such as '**Between heparin treatment, fibrinolysis and embolectomy, the data from reported cases and meta-analyses seem to be disparate' **as there is enough evidence to support the use of each modality based on the clinical scenario, it would be advisable to back up such statements with appropriate references.** • **This statement needs clarification-.** Syncope is a type of brief loss of knowledge with tonic-clonic convulsions without loss of urine or biting of the tongue, or postcritical coma. • **Could clearer TTE images be included as the image is of low quality and does not project well.** • **Any reason for not administering thrombolysis? Although not clear, the thrombus in Figure 6 is present in the right main pulmonary artery? With syncopal features large volume thrombus, why thrombolysis was not considered? Was thrombectomy not an option?** • **I would refer to clear AHA and ESC guidelines and include these in the discussion section** • **The references need to be reviewed with adherence to a single type of referencing**	
Minor REVISION comments	• It may be imperative to address the issues as highlighted as above to ensure that the article is still impactful	
Optional/General comments	Overall a clinical useful topic has been described, the authors should be commended on highlighting this.	

PART 2:

	Reviewer's comment	**Author's comment** ***(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)***
Are there ethical issues in this manuscript?	***(If yes, Kindly please write down the ethical issues here in details)***
