

## Review Form 1.6

Journal Name:	<a href="#">Asian Journal of Environment &amp; Ecology</a>
Manuscript Number:	Ms_AJEE_81648
Title of the Manuscript:	Temporal Survey of Heavy Metal Loads in Surface Water, Sediments and Shrimps from Iko River Estuary, Eastern Obolo L.G.A, Nigeria
Type of the Article	Original Research Article

### General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalajee.com/index.php/AJEE/editorial-policy> )

### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>It is better to state the unit of measurement of parameter on the Table (see Table 1 for correction). In section 3.1, para 2, the unit concentration of Zn (65.35) in sediment should be in Mg/Kg not Mg/L also attach unit to concentration of 19.57 in November. Change Temporo-partial in second to the last sentence in section 1 (Introduction) to Temporo-Spatial.</p> <p>The discussion section was done in relation to literature review, which makes it good academically.</p>	
<b>Minor</b> REVISION comments	<p>Study Design is not specific. Why the choice of glass bottles as against polyethylene containers for the collection physicochemical parameters and metals? Sampling collection methods and preservation of metals in solution is not satisfactory. It would be nice to state the source of equation in section 2.5 (Calculation). The last paragraph in section 3.1 should be rephrase with respect to Manganese to have a better flow.</p>	
<b>Optional/General</b> comments	<p>I have a problem with the validity of this research article. My concerns are; (1). The values of the metals are well beyond the maximum values allowable by WHO and US EPA for a non-point source pollution (again, it is a flowing river which allows some mixing). (2). Metals like Cd is found mainly in bottom sediment and suspended particle than in solution.</p>	

Review Form 1.6

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
