PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The scientific article on tilapia is very interesting. It discusses the importance of farming this group of aquatic species in the main producing countries. The importance of tilapia in fish consumption, current production systems, value chain actors and socio-economic constraints are identified, solutions proposed to overcome them.</p> <p>All these aspects were approached on the basis of a fairly broad bibliographical review with a very synthesis. But some important elements such as tilapia farming in China and the role played by genetic research with the creation of strains adapted to climate change and consumer preferences or the methods of organization and supervision of producers should be addressed. in this scientific article.</p> <p>By integrating these different elements, the article deserves to be published in your journal.</p>	
Minor REVISION comments	<p>The author should include in his document a location map of the main tilapia producing countries and a table showing the relative importance of its production compared to other aquaculture species cultured in the countries.</p>	
Optional/General comments	<p>The summary discussed in this scientific article is interesting in more ways than one. He reviews the production of tilapia in the world, one of the groups of species whose socio-economic importance is confirmed in many developing countries, including those on the African continent.</p>
