Review Form 1.6

Journal Name:	**International Journal of Environment and Climate Change**
Manuscript Number:	**Ms_IJECC_83594**
Title of the Manuscript:	**SURVEY OF INSECT PESTS AND NATURAL ENEMIES ASSOCIATED WITH CHILLI IN VARIOUS DISTRICTS OF KYMORE PLATEAU & SATPURA HILLS ZONE OF MADHYA PRADESH**
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty'**, provided the manuscript is scientifically robust and technically sound.
To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	**(1)** Author started abstract with methodology, instead of introduction about pest/crop. Hence, the abstract should include introduction, methodology, result and conclusion in sequence. **(2)** Material and method section is very poorly written. It must answer several queries. Author has not mentioned the detailed method of observing insects. Whether they were recorded per plant/leaf/twig etc. need to be mentioned in M&M section. How the microscopic mites are observed per leaf? In the field or lab. ? Sampling part, sampling method, sampling size is missing. **(3)** Survey data must include the time (may be meteorological standard week) of incidence/occurrence of pests. (**4)** How many times the pest population was monitored. Whether data presented is mean of several observations / visits? if data is based on only one observation/visit, then it's a poor representation. How many observations were recorded during each crop stage? **(5)** At several places author has mentioned "peak mean population". Usually there will be a single peak per crop stage / crop growing season. How the mean of peak is calculated in each crop stage per district ? In text author mentions "peak mean population" while in table it is mentioned as just "mean population". Author must clear the confusion. **(6)** Conclusion part is missing at the end of MS. The study must be concluded to convey results properly to the readers. **(7)** the pest population may be subjected to appropriate statistical tool to compare the population across the districts to present the conclusion /inference **(8)** The results are not properly discussed. However results are simply supported by past literatures. Author must discuss his experimental results to draw the inference. **(9)** The overall language of the MS need to be improved.	
Minor REVISION comments	Minor revisions are mentioned in the MS wherever needed	
Optional/General comments	Title may be modified as suggested in MS
