PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	This paper shows the effect of ENSO on temperature in Tamil Nadu. The data seems to be meaningful, but there are some parts that should be changed, such as the method of presenting charts. The details are described below, so it is recommended that you resubmit the revised manuscript after referring to it. - It is better to add a figure or table that can be directly understood as the content of the conclusion. For example, if you want to show that there is no statistical difference, why not show the details in a table? Or why not combine various data from the same city into one figure?	
Minor REVISION comments	- There are multiple ways to describe the symbols "±" and "℃". It is better to unify including the character spacing. - Only Fig.2 has "over" in the title, and the others have "in". Do you have any special intentions?	
Optional/General comments	- The effective values (number of digits) on the vertical axis in the figure are not unified.	

PART 2:

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Are there ethical issues in this manuscript?	*(If yes, Kindly please write down the ethical issues here in details)*
