

## Review Form 1.6

Journal Name:	<a href="#">International Journal of Plant &amp; Soil Science</a>
Manuscript Number:	Ms_IJPSS_86089
Title of the Manuscript:	Effect of Soil Test Crop Response Approach on Yield, Nutrient Content and Uptake by Wheat (Triticum aestivum L.)
Type of the Article	Original Research Article

### General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journalijpss.com/index.php/IJPSS/editorial-policy> )

### **PART 1:** Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments	The article meets all the requirements of a scientific research. There are abbreviations in the abstract, which is not accepted. The year of the 2018/19 survey is indicated, and the experience is reflected below as a "long term field". However, data from one growing season of a field experiment cannot be accepted as reliable. The introduction acquaints the reader in detail with the problem of the study. There are abbreviations that are not explained, again. The purpose of the study is plain. In materials and methods, I recommend the author / authors to indicate in which phase the treatments were performed. Temperature degrees are not spelled correctly – C → °C. In the results and discussion the tables are not introduced in the text. I recommend the author (s) to present their articles in the same units. Treatments are reflected in q ha <sup>-1</sup> and data in kg ha <sup>-1</sup> . The conclusions objectively report the results obtained.	
<b><u>Minor</u></b> REVISION comments		
<b><u>Optional/General</u></b> comments	The article deals with a topical issue. Wheat (Triticum aestivum L.) is undoubtedly the most cultivated crop in the world. And also of the greatest importance for the bakery industry. Any research that has helped solve the problem of reduced wheat production is valuable. I recommend the researcher (s) to continue the study and publish the impact of long-term treatments.	

Review Form 1.6

**PART 2:**

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
