PART 1: Review Comments

	Reviewer’s comment	Author’s comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	CRC is now a serious public health problem all over the world. This is a well-designed study for an interesting topic. Here I only have three minor issues for the authors to consider. (1) In the “Introduction” part, basic information about what people are with the high risk for CRC should be mentioned. Similarly, about the CRC screening methods, the applicability of each method for whom it should be applied should be introduced. (2) For table 2-4, I wonder whether gender and age would affect the action of the patients. If so, please also list the data of different genders and ages. (3) The COI section is somehow highlighted in yellow. Please correct it.	
Optional/General comments		

PART 2:

	Reviewer’s comment	Author’s comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
