### PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The article is well-written. The author has knowledge of economy of words. He makes it easy to comprehend his topic which deals with breast cancer. His work provides the knowledge that triple negative breast cancers do not express basal markers like CK5&6 and hormonal receptor AR and are therefore luminal type triple negative breast cancers as opposed to basal-like TNBC. Ethical concern has that Cape Coast Teaching Hospital institutional review board gave him/her the approval before the commencement of the work.	
<b>Minor</b> REVISION comments	The reference style unless it is approved by the journal should be checked properly. It immediately gets confusing when reference 1 appear again down at the end of the article. Otherwise, the work is good and I will highly recommend it for publication.	
<b>Optional/General</b> comments		

### PART 2:
