PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	The case report theme is very good, but I think the authors can further explore differential diagnoses, which implies different therapeutic plans. I think this might help other readers in handling similar cases.	
Optional/General comments	Authors should review references throughout the text. We have some paragraphs without an indication of the reference, which makes it difficult for the reader to go after the articles in case of interest. Example: The trial included all patients having a platelet count of fewer than 150103/L, as determined by a peripheral blood smear. The patients' clinical histories were researched, with an emphasis on etiological correlations. In Conclusion : Thrombocytopenia is a frequent medical condition that is sometimes linked to life-threatening bleeding problems. Early detection and aggressive treatment can improve outcomes . My patient show great improvement after getting the treatment.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
