### **PART 1:** Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments	<p>For the follow up and results sector, there is a reference for improvement of the BBS and DGI and WHO-QOL. How did you come to this conclusion? Do you have any measurement with data? Did you run any statistical test, Is there any statistically significant difference that results to this improvement?</p> <p>Regarding the Discussion, did the general bibliography agree or disagree with your findings? How is this improvement important for the general population? Are any limitations to your case study?</p>	
<b><u>Minor</u></b> REVISION comments	<p>On the examination phase how did the authors measured the balance and coordination skills of the patient? What clinical test were used for the mentioned examination?</p> <p>The Frenkel exercises have been developed us a technique for the coordination, did you apply the exercises for the balance or the coordination, because in the manuscript is correlated with the balance.</p> <p>You used coordination exercises us a part of the rehabilitation program for the impairment of the coordination skills of the patient. Did you aim to examine the above ability as a post-evaluation measurement?</p>	
<b><u>Optional/General</u></b> comments	<p>In the Abstract there is a use of abbreviations like "CP", is easiest for the viewers to read the full form of the word, resulting to better understanding of the paragraph at this point.</p>
